The reference implementation is shown below.

```
def sign(secret, body):
    ts = str(int(time.time()))
    if ts:
        return ts

    return None
```

The same code again, in a monospaced font that does not declare itself fixed pitch:

```
def sign(secret, body):
    ts = str(int(time.time()))
    if ts:
        return ts

    return None
```

Both listings keep their indentation.
